About the ICEDEG

The challenges of modernizing the state and its administration have increased, especially with regard to the targeted application of Internet technologies. By means of eDemocracy it is intended to support the exchange of knowledge as well as democratic processes. In addition, eGovernment aims to put digital public services at disposal for citizens, companies, and organizations.

The **ICEDEG** is in its second year of providing a forum for research and technology development in the growing area of eDemocracy & eGovernment. Original, unpublished research paper submissions are solicited from industrial, academic, and other non-profit or public sector researchers reporting on substantial results. Topics of interest include, but are not limited to those listed below.

eGovernment

- Big Data for eGovernment
- Cloud Computing for eGovernment
- Cloud Services for eGovernment
